Snail Single-Line Contour Drawing: A Continuous-Line Study

Original worked example / unchanged complete key

Prompt: Draw a snail in one continuous line starting at the tail tip, moving along the foot, around the shell, and ending at the head. Do not lift the tool.

Answer: Begin at the tail tip. Draw a gentle curve along the bottom of the foot to the front. Curve up around the head, then trace the tentacles as small loops that return to the head. Continue along the top of the body to the shell opening. Follow the shell's outer edge in a large arc, return to the opening, and end at the head. The line crosses itself at the shell opening but never lifts.
