Domain and Range from Graphs

REFERENCE / CASE 1

The connected segments shown have filled endpoints. Give the domain and range in interval notation.

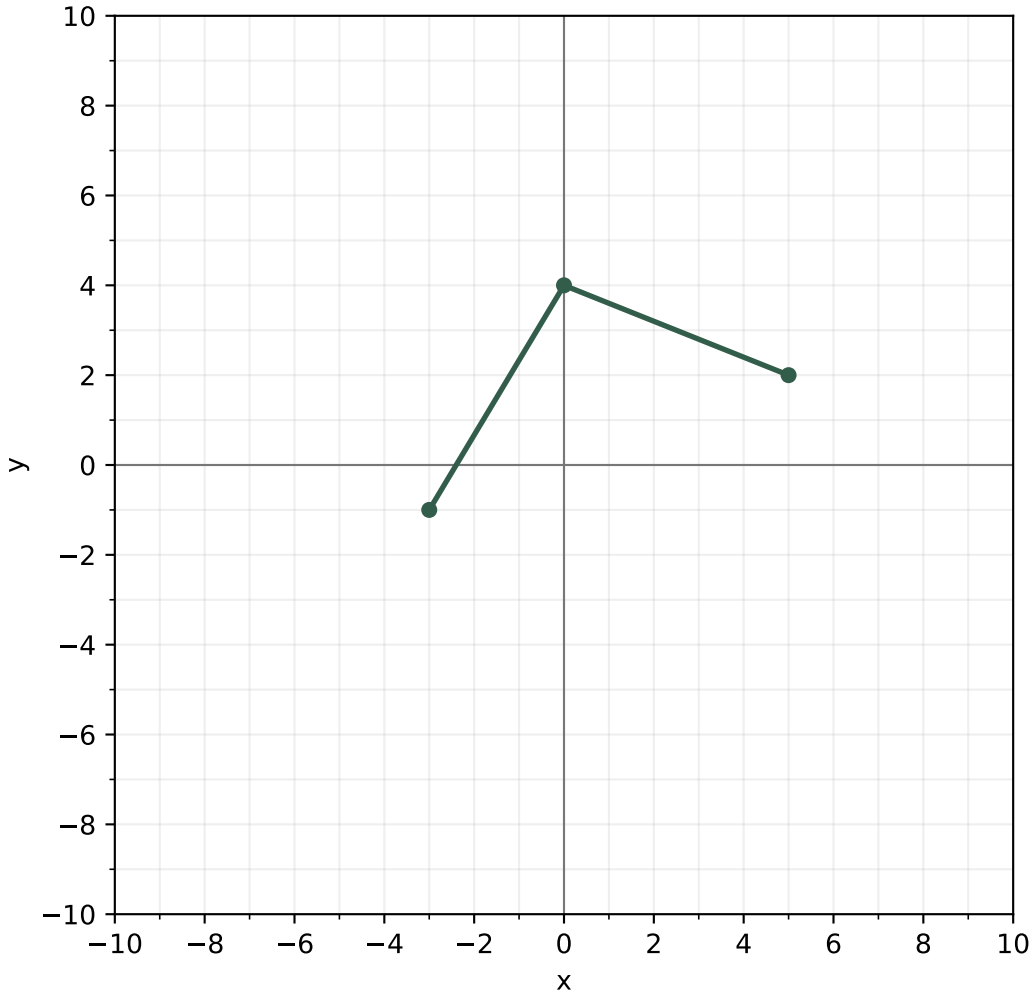

METHOD: Read the leftmost and rightmost x-values, including both endpoints. Read the lowest and highest y-values; the segments cover all intermediate values.
Reference diagram supplied. Use the separate practice sheet before checking the worked answer.

Domain and Range from Graphs

REFERENCE / CASE 2

The connected segments shown have filled endpoints. Give the domain and range in interval notation.

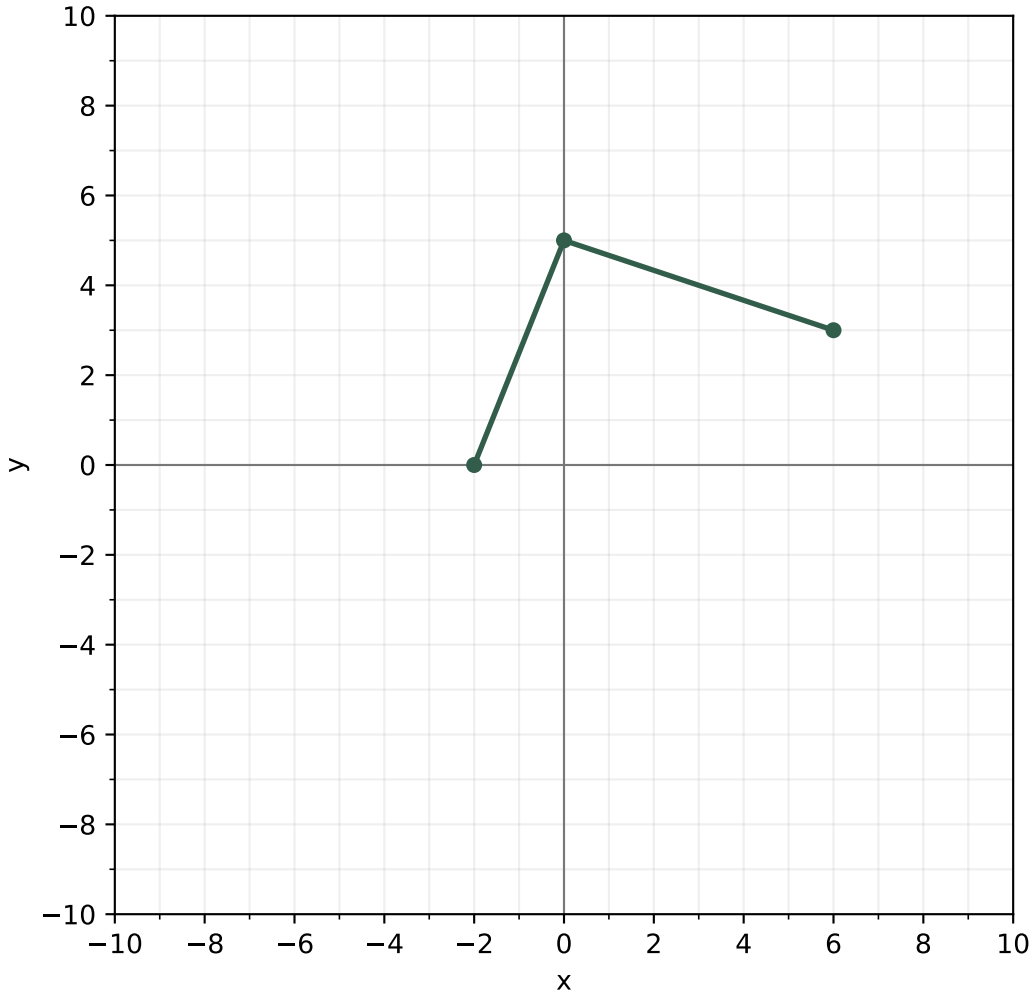

METHOD: Read the leftmost and rightmost x-values, including both endpoints. Read the lowest and highest y-values; the segments cover all intermediate values.
Reference diagram supplied. Use the separate practice sheet before checking the worked answer.

Domain and Range from Graphs

REFERENCE / CASE 3

The connected segments shown have filled endpoints. Give the domain and range in interval notation.

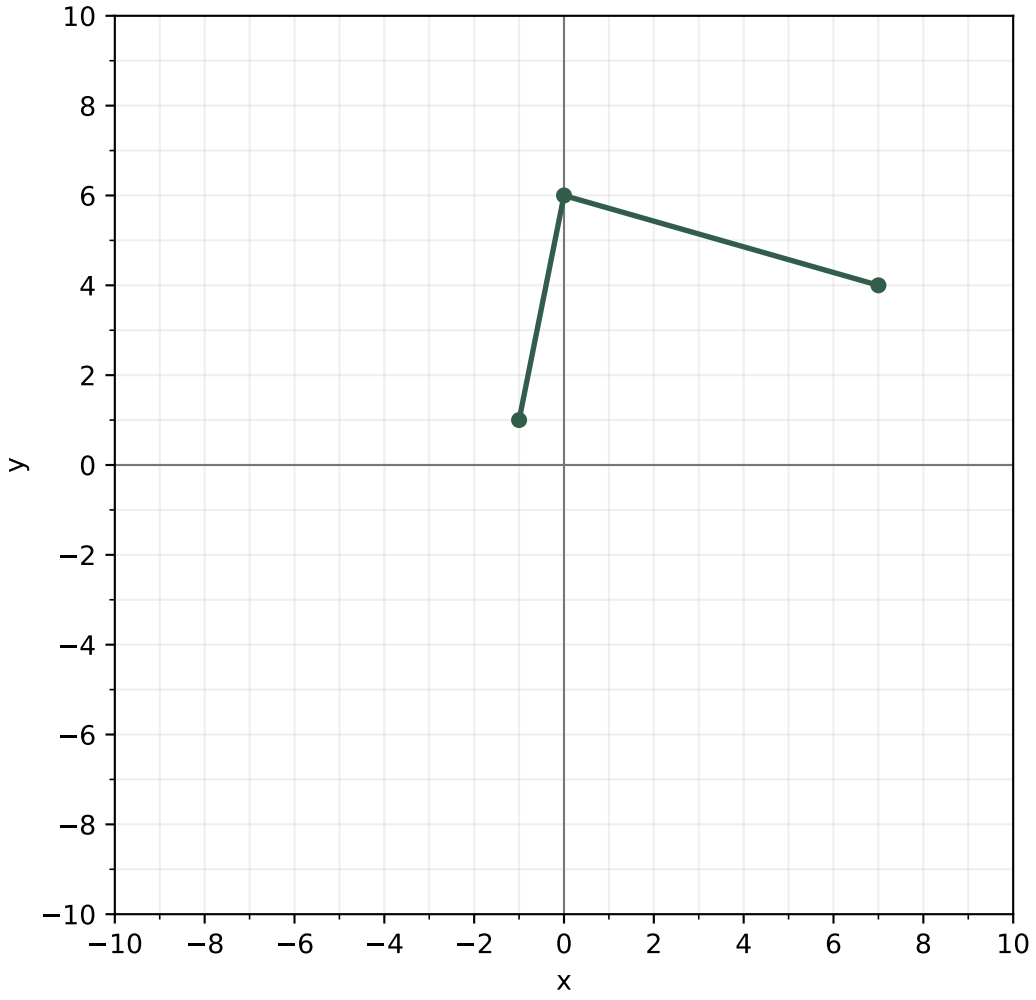

METHOD: Read the leftmost and rightmost x-values, including both endpoints. Read the lowest and highest y-values; the segments cover all intermediate values.
Reference diagram supplied. Use the separate practice sheet before checking the worked answer.

Domain and Range from Graphs

REFERENCE / CASE 4

The connected segments shown have filled endpoints. Give the domain and range in interval notation.

METHOD: Read the leftmost and rightmost x-values, including both endpoints. Read the lowest and highest y-values; the segments cover all intermediate values.
Reference diagram supplied. Use the separate practice sheet before checking the worked answer.
