How to Draw Antlers — Free Practice Sheets

ANSWER / CASE 1

antlers: Trace the reference outline, then practise the contour independently. Compare with the separate full reference sheet.

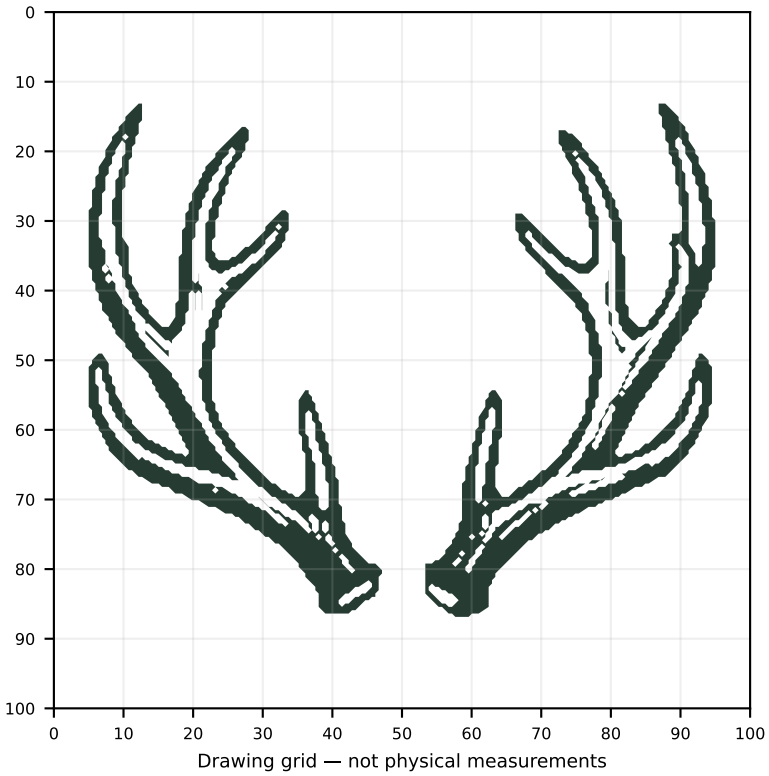

ANSWER: Example solution: preserve symmetrical pair of antlers, curved main beams sweeping upward and outward, multiple branching tines on each side. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a mirrored pair of thick curved main beams starting from the base and sweeping outward and upward.
2. Add branching tines along the outer and inner edges of each main beam, keeping the left and right sides symmetrical.
3. Refine the tine tips to taper to points and thicken the base where the antlers meet.
4. Outline the antlers with clean contour lines and add simple interior line shading to suggest volume.

How to Draw Antlers — Free Practice Sheets

ANSWER / CASE 2

antlers: Copy the reference onto the blank grid, using matching grid intersections. Compare with the separate full reference sheet.

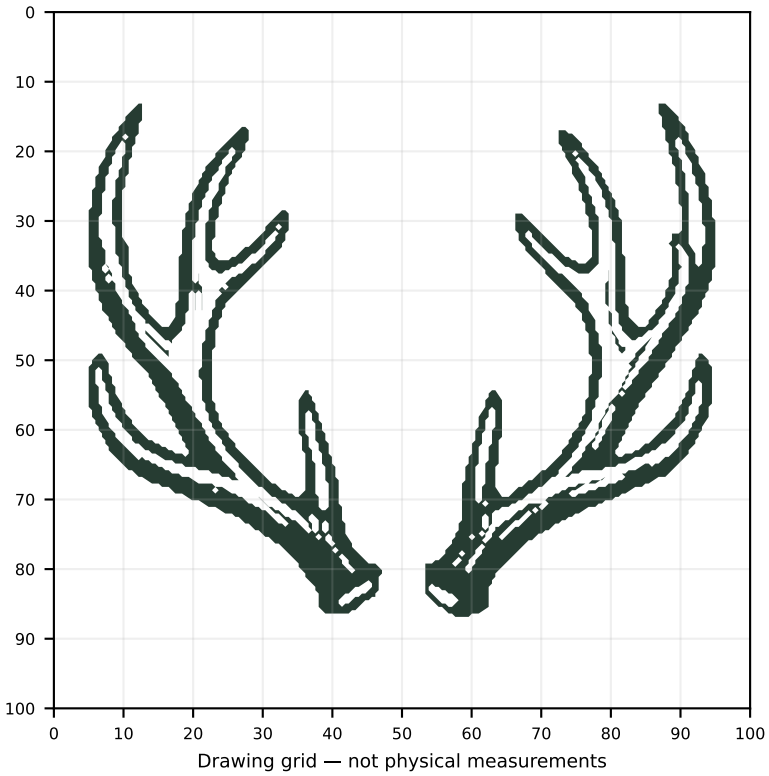

ANSWER: Example solution: preserve symmetrical pair of antlers, curved main beams sweeping upward and outward, multiple branching tines on each side. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a mirrored pair of thick curved main beams starting from the base and sweeping outward and upward.
2. Add branching tines along the outer and inner edges of each main beam, keeping the left and right sides symmetrical.
3. Refine the tine tips to taper to points and thicken the base where the antlers meet.
4. Outline the antlers with clean contour lines and add simple interior line shading to suggest volume.

How to Draw Antlers — Free Practice Sheets

ANSWER / CASE 3

antlers: Use the bounding frame and center guide to place the silhouette, then add the identifying details. Compare with the separate full reference sheet.

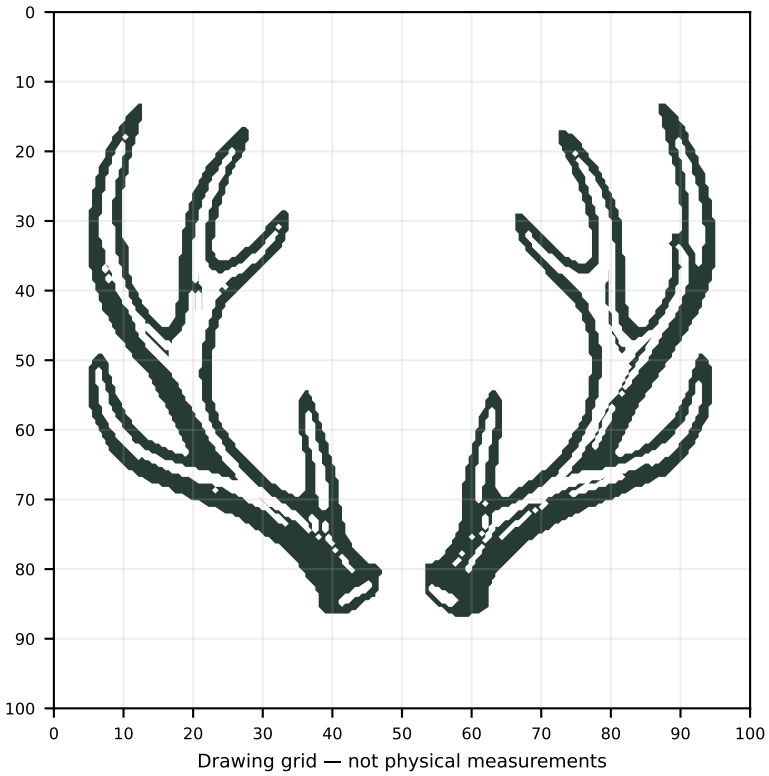

ANSWER: Example solution: preserve symmetrical pair of antlers, curved main beams sweeping upward and outward, multiple branching tines on each side. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a mirrored pair of thick curved main beams starting from the base and sweeping outward and upward.
2. Add branching tines along the outer and inner edges of each main beam, keeping the left and right sides symmetrical.
3. Refine the tine tips to taper to points and thicken the base where the antlers meet.
4. Outline the antlers with clean contour lines and add simple interior line shading to suggest volume.

How to Draw Antlers — Free Practice Sheets

ANSWER / CASE 4

antlers: Complete the blank right-hand portion using the full reference. Compare with the separate full reference sheet.

ANSWER: Example solution: preserve symmetrical pair of antlers, curved main beams sweeping upward and outward, multiple branching tines on each side. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a mirrored pair of thick curved main beams starting from the base and sweeping outward and upward.
2. Add branching tines along the outer and inner edges of each main beam, keeping the left and right sides symmetrical.
3. Refine the tine tips to taper to points and thicken the base where the antlers meet.
4. Outline the antlers with clean contour lines and add simple interior line shading to suggest volume.
