How to Draw Saw — Free Practice Sheets

ANSWER / CASE 1

saw: Trace the reference outline, then practise the contour independently. Compare with the separate full reference sheet.

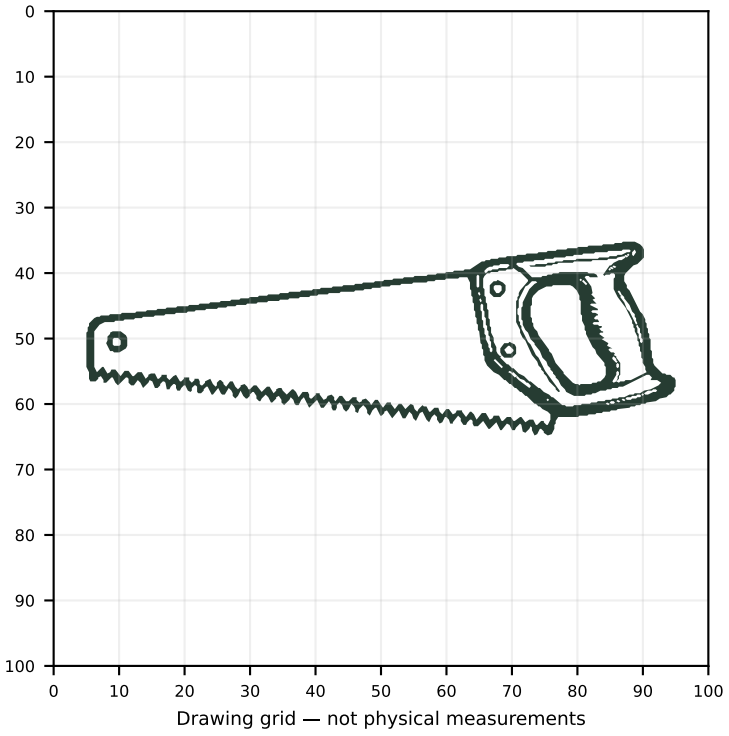

ANSWER: Example solution: preserve long straight blade body with a row of sharp zigzag teeth along the bottom edge, angled pistol-grip style handle attached at the right end, rounded hole near the far left tip of the blade. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a long, slightly tapered horizontal rectangle for the blade, with a small circular hole near the left tip.
2. Add a continuous zigzag line along the bottom edge of the blade to form the toothed cutting edge.
3. At the right end, draw the angled handle outline: a curved top horn, a rounded grip opening, and a flared bottom section.
4. Add small circular rivets where the handle meets the blade, then clean up overlapping construction lines.

ANSWER / CASE 2

saw: Copy the reference onto the blank grid, using matching grid intersections. Compare with the separate full reference sheet.

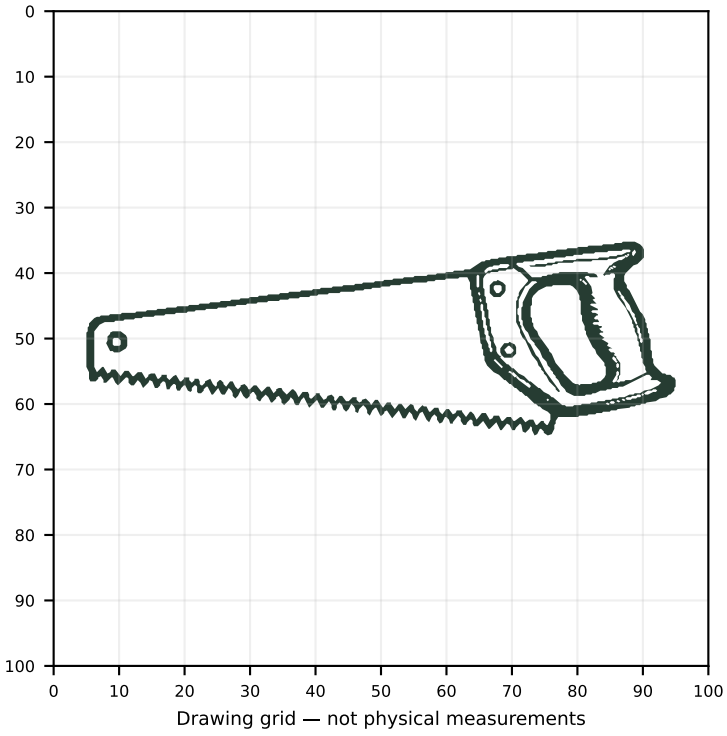

ANSWER: Example solution: preserve long straight blade body with a row of sharp zigzag teeth along the bottom edge, angled pistol-grip style handle attached at the right end, rounded hole near the far left tip of the blade. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a long, slightly tapered horizontal rectangle for the blade, with a small circular hole near the left tip.
2. Add a continuous zigzag line along the bottom edge of the blade to form the toothed cutting edge.
3. At the right end, draw the angled handle outline: a curved top horn, a rounded grip opening, and a flared bottom section.
4. Add small circular rivets where the handle meets the blade, then clean up overlapping construction lines.

ANSWER / CASE 3

saw: Use the bounding frame and center guide to place the silhouette, then add the identifying details. Compare with the separate full reference sheet.

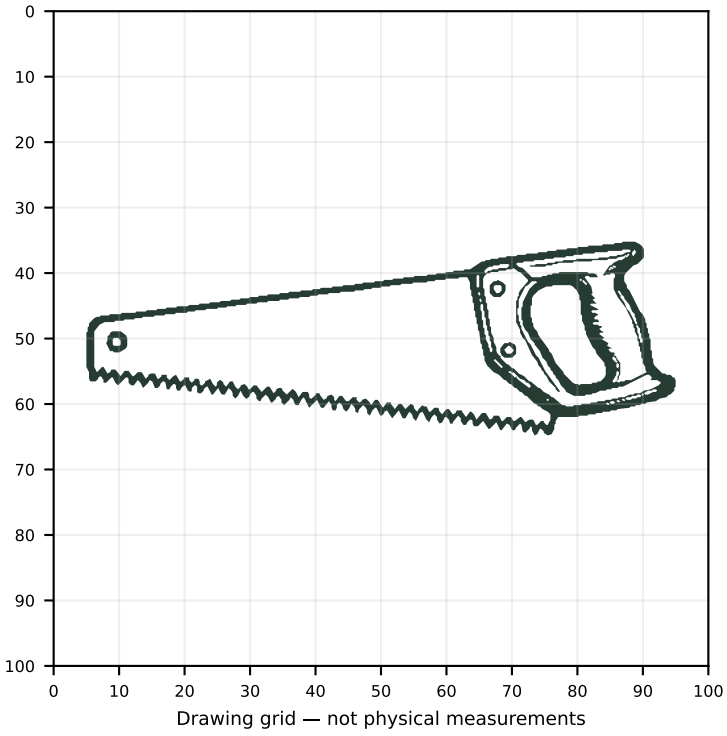

ANSWER: Example solution: preserve long straight blade body with a row of sharp zigzag teeth along the bottom edge, angled pistol-grip style handle attached at the right end, rounded hole near the far left tip of the blade. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a long, slightly tapered horizontal rectangle for the blade, with a small circular hole near the left tip.
2. Add a continuous zigzag line along the bottom edge of the blade to form the toothed cutting edge.
3. At the right end, draw the angled handle outline: a curved top horn, a rounded grip opening, and a flared bottom section.
4. Add small circular rivets where the handle meets the blade, then clean up overlapping construction lines.

How to Draw Saw — Free Practice Sheets

ANSWER / CASE 4

saw: Complete the blank right-hand portion using the full reference. Compare with the separate full reference sheet.

ANSWER: Example solution: preserve long straight blade body with a row of sharp zigzag teeth along the bottom edge, angled pistol-grip style handle attached at the right end, rounded hole near the far left tip of the blade. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a long, slightly tapered horizontal rectangle for the blade, with a small circular hole near the left tip.
2. Add a continuous zigzag line along the bottom edge of the blade to form the toothed cutting edge.
3. At the right end, draw the angled handle outline: a curved top horn, a rounded grip opening, and a flared bottom section.
4. Add small circular rivets where the handle meets the blade, then clean up overlapping construction lines.
