How to Draw Tomato Plant — Free Practice Sheets

ANSWER / CASE 1

tomato plant: Trace the reference outline, then practise the contour independently. Compare with the separate full reference sheet.

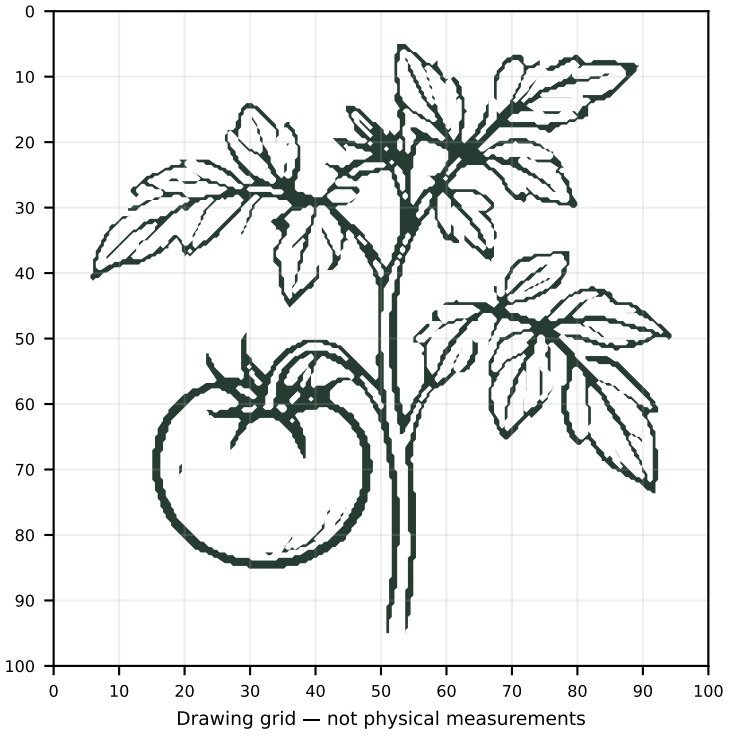

ANSWER: Example solution: preserve large round fruit with a star-shaped calyx at the top, compound leaves with serrated, pointed leaflets branching from the stem, thick central stem with a curved pedicel connecting the fruit to the stem. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a vertical central stem line with a slight curve, then add a curved branch line that arcs down to the left to support the fruit.
2. Sketch a large circle for the tomato fruit at the end of the curved branch, and add a star-shaped calyx with pointed sepals on top of the fruit.
3. Attach compound leaves to the main stem and upper branches by drawing a central leaf midrib and adding several serrated, pointed leaflets along each side.
4. Outline the stem and fruit with thicker lines, add short hatching on the lower right of the tomato for volume, and erase construction guidelines.

ANSWER / CASE 2

tomato plant: Copy the reference onto the blank grid, using matching grid intersections. Compare with the separate full reference sheet.

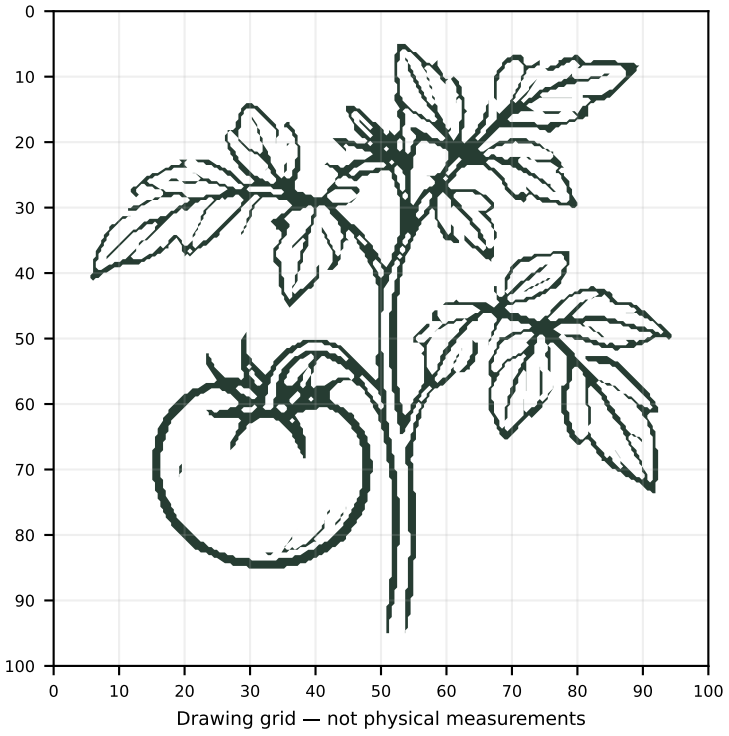

ANSWER: Example solution: preserve large round fruit with a star-shaped calyx at the top, compound leaves with serrated, pointed leaflets branching from the stem, thick central stem with a curved pedicel connecting the fruit to the stem. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a vertical central stem line with a slight curve, then add a curved branch line that arcs down to the left to support the fruit.
2. Sketch a large circle for the tomato fruit at the end of the curved branch, and add a star-shaped calyx with pointed sepals on top of the fruit.
3. Attach compound leaves to the main stem and upper branches by drawing a central leaf midrib and adding several serrated, pointed leaflets along each side.
4. Outline the stem and fruit with thicker lines, add short hatching on the lower right of the tomato for volume, and erase construction guidelines.

How to Draw Tomato Plant — Free Practice Sheets

ANSWER / CASE 3

tomato plant: Use the bounding frame and center guide to place the silhouette, then add the identifying details. Compare with the separate full reference sheet.

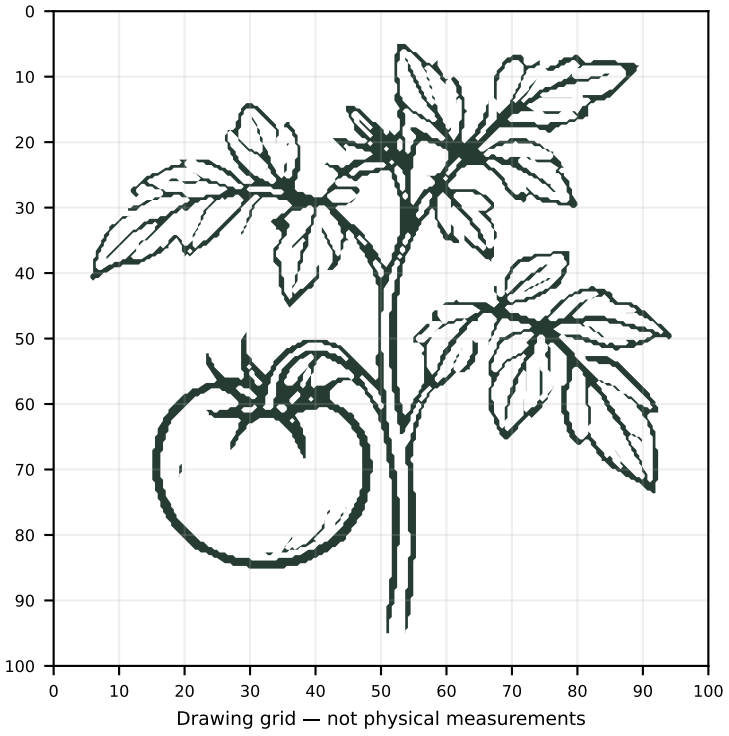

ANSWER: Example solution: preserve large round fruit with a star-shaped calyx at the top, compound leaves with serrated, pointed leaflets branching from the stem, thick central stem with a curved pedicel connecting the fruit to the stem. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a vertical central stem line with a slight curve, then add a curved branch line that arcs down to the left to support the fruit.
2. Sketch a large circle for the tomato fruit at the end of the curved branch, and add a star-shaped calyx with pointed sepals on top of the fruit.
3. Attach compound leaves to the main stem and upper branches by drawing a central leaf midrib and adding several serrated, pointed leaflets along each side.
4. Outline the stem and fruit with thicker lines, add short hatching on the lower right of the tomato for volume, and erase construction guidelines.

How to Draw Tomato Plant — Free Practice Sheets

ANSWER / CASE 4

tomato plant: Complete the blank right-hand portion using the full reference. Compare with the separate full reference sheet.

ANSWER: Example solution: preserve large round fruit with a star-shaped calyx at the top, compound leaves with serrated, pointed leaflets branching from the stem, thick central stem with a curved pedicel connecting the fruit to the stem. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a vertical central stem line with a slight curve, then add a curved branch line that arcs down to the left to support the fruit.
2. Sketch a large circle for the tomato fruit at the end of the curved branch, and add a star-shaped calyx with pointed sepals on top of the fruit.
3. Attach compound leaves to the main stem and upper branches by drawing a central leaf midrib and adding several serrated, pointed leaflets along each side.
4. Outline the stem and fruit with thicker lines, add short hatching on the lower right of the tomato for volume, and erase construction guidelines.
