How to Draw Mangrove — Free Practice Sheets

ANSWER / CASE 1

mangrove: Trace the reference outline, then practise the contour independently. Compare with the separate full reference sheet.

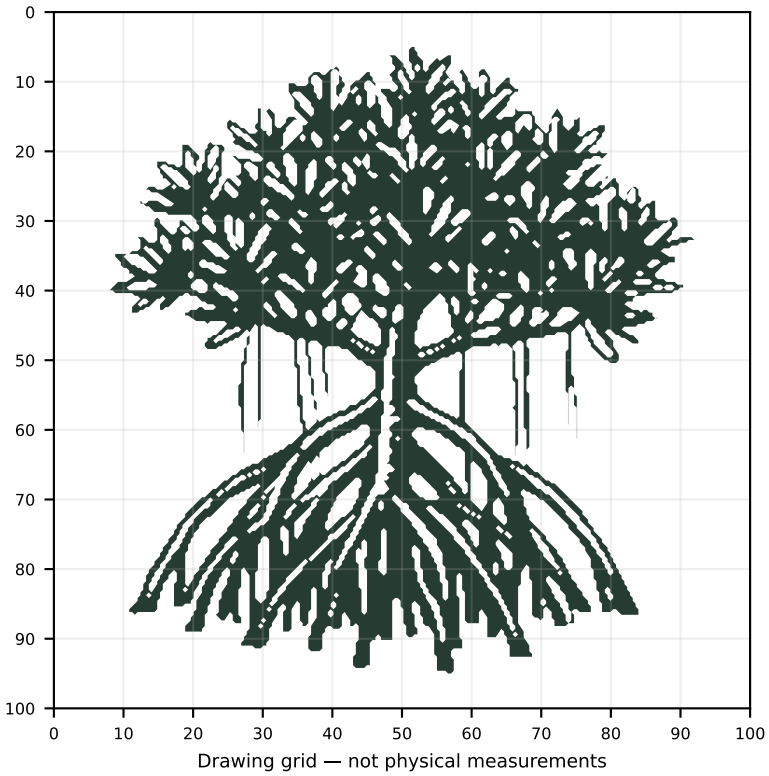

ANSWER: Example solution: preserve dense leafy canopy with clustered elongated leaves, twisted trunk splitting into multiple stems, arching stilt roots radiating above the waterline. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw a central twisted trunk that forks into several upward branches.
2. Add a dense rounded canopy of clustered elongated leaves around the branch tips.
3. Draw arching stilt roots radiating outward and downward from the base of the trunk.
4. Add thin hanging aerial roots descending from the branches into the root zone.

How to Draw Mangrove — Free Practice Sheets

ANSWER / CASE 2

mangrove: Copy the reference onto the blank grid, using matching grid intersections. Compare with the separate full reference sheet.

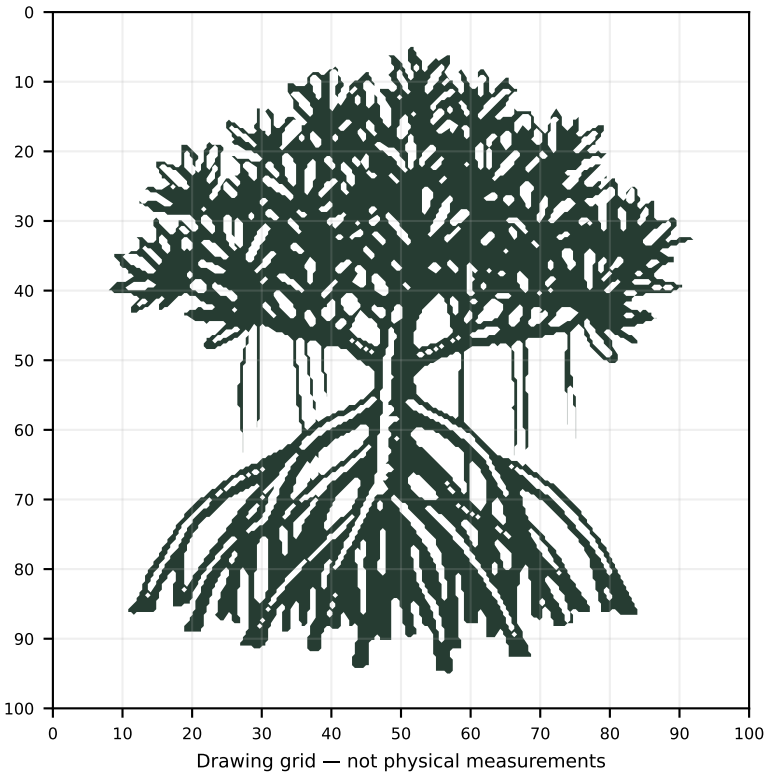

ANSWER: Example solution: preserve dense leafy canopy with clustered elongated leaves, twisted trunk splitting into multiple stems, arching stilt roots radiating above the waterline. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.

1. Draw a central twisted trunk that forks into several upward branches.
2. Add a dense rounded canopy of clustered elongated leaves around the branch tips.
3. Draw arching stilt roots radiating outward and downward from the base of the trunk.
4. Add thin hanging aerial roots descending from the branches into the root zone.

How to Draw Mangrove — Free Practice Sheets

ANSWER / CASE 3

mangrove: Use the bounding frame and center guide to place the silhouette, then add the identifying details. Compare with the separate full reference sheet.

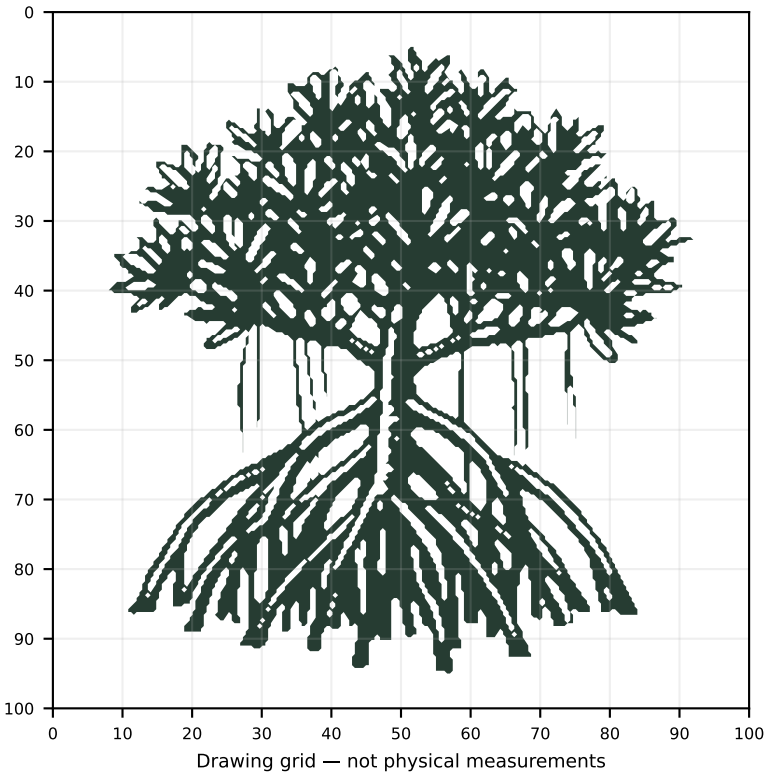

ANSWER: Example solution: preserve dense leafy canopy with clustered elongated leaves, twisted trunk splitting into multiple stems, arching stilt roots radiating above the waterline. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.

1. Draw a central twisted trunk that forks into several upward branches.
2. Add a dense rounded canopy of clustered elongated leaves around the branch tips.
3. Draw arching stilt roots radiating outward and downward from the base of the trunk.
4. Add thin hanging aerial roots descending from the branches into the root zone.

How to Draw Mangrove — Free Practice Sheets

ANSWER / CASE 4

mangrove: Complete the blank right-hand portion using the full reference. Compare with the separate full reference sheet.

ANSWER: Example solution: preserve dense leafy canopy with clustered elongated leaves, twisted trunk splitting into multiple stems, arching stilt roots radiating above the waterline. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.

1. Draw a central twisted trunk that forks into several upward branches.
2. Add a dense rounded canopy of clustered elongated leaves around the branch tips.
3. Draw arching stilt roots radiating outward and downward from the base of the trunk.
4. Add thin hanging aerial roots descending from the branches into the root zone.
