How to Draw Backhoe — Free Practice Sheets

ANSWER / CASE 1

backhoe: Trace the reference outline, then practise the contour independently. Compare with the separate full reference sheet.

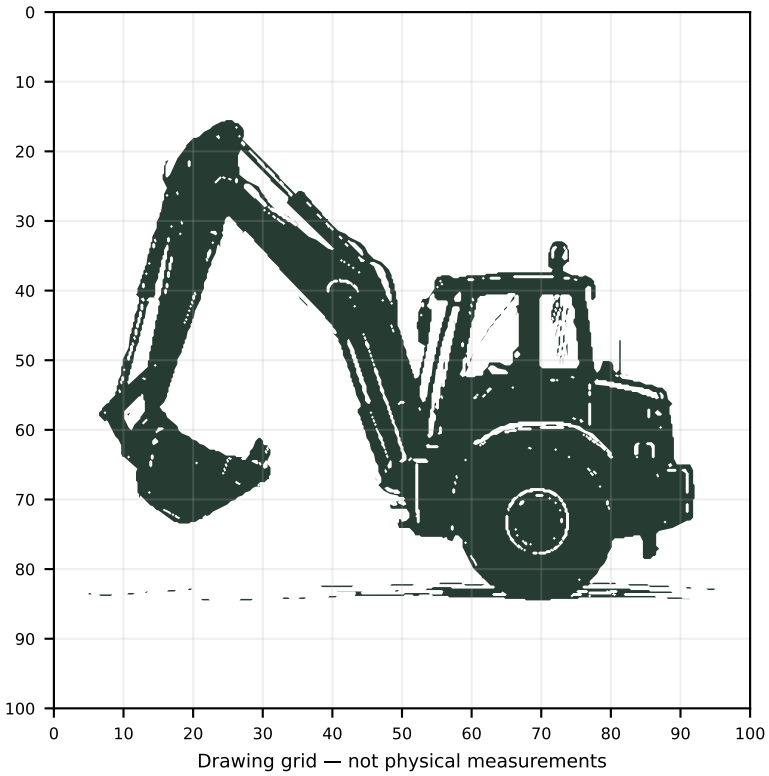

ANSWER: Example solution: preserve articulated arm with boom and stick segments, bucket at the end of the arm, large rear wheel. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw the large rear wheel as a circle with a smaller inner hub circle.
2. Sketch the cab body above and slightly forward of the rear wheel, using a boxy outline with window divisions.
3. Extend the articulated arm from the rear of the cab upward and forward, drawing two connected segments with hinge points.
4. Attach the bucket shape at the end of the arm, then add the front stabilizer/loader arm and ground line.

How to Draw Backhoe — Free Practice Sheets

ANSWER / CASE 2

backhoe: Copy the reference onto the blank grid, using matching grid intersections. Compare with the separate full reference sheet.

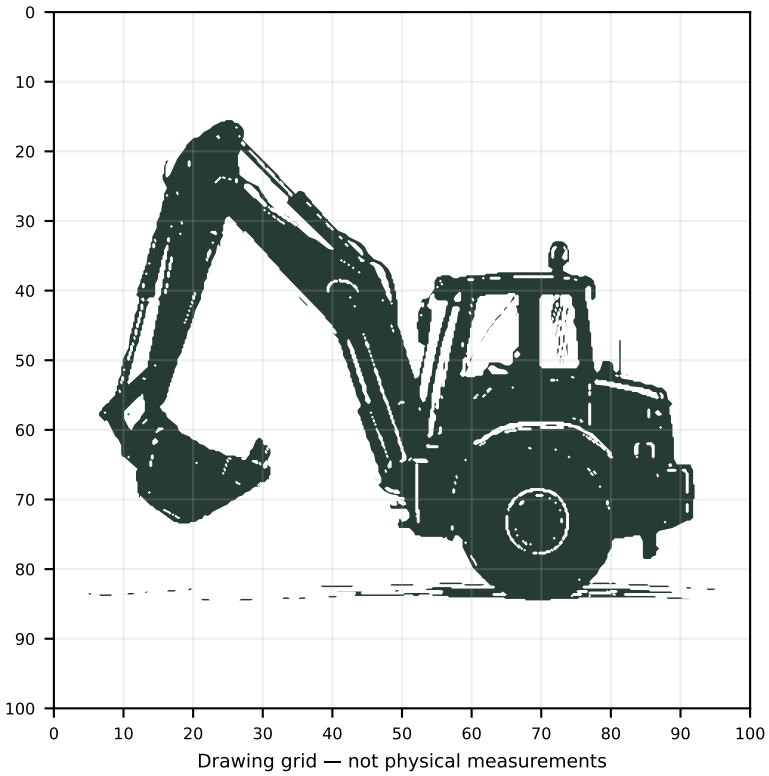

ANSWER: Example solution: preserve articulated arm with boom and stick segments, bucket at the end of the arm, large rear wheel. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw the large rear wheel as a circle with a smaller inner hub circle.
2. Sketch the cab body above and slightly forward of the rear wheel, using a boxy outline with window divisions.
3. Extend the articulated arm from the rear of the cab upward and forward, drawing two connected segments with hinge points.
4. Attach the bucket shape at the end of the arm, then add the front stabilizer/loader arm and ground line.

How to Draw Backhoe — Free Practice Sheets

ANSWER / CASE 3

backhoe: Use the bounding frame and center guide to place the silhouette, then add the identifying details. Compare with the separate full reference sheet.

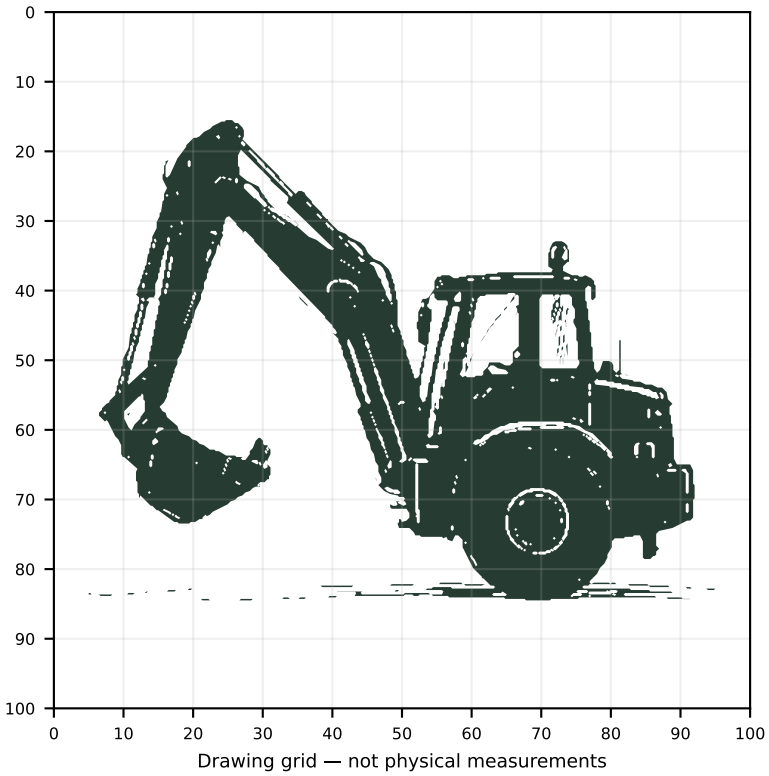

ANSWER: Example solution: preserve articulated arm with boom and stick segments, bucket at the end of the arm, large rear wheel. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw the large rear wheel as a circle with a smaller inner hub circle.
2. Sketch the cab body above and slightly forward of the rear wheel, using a boxy outline with window divisions.
3. Extend the articulated arm from the rear of the cab upward and forward, drawing two connected segments with hinge points.
4. Attach the bucket shape at the end of the arm, then add the front stabilizer/loader arm and ground line.

How to Draw Backhoe — Free Practice Sheets

ANSWER / CASE 4

backhoe: Complete the blank right-hand portion using the full reference. Compare with the separate full reference sheet.

ANSWER: Example solution: preserve articulated arm with boom and stick segments, bucket at the end of the arm, large rear wheel. Other drawings can be correct; assess the visible features and proportions rather than pixel-perfect matching.
1. Draw the large rear wheel as a circle with a smaller inner hub circle.
2. Sketch the cab body above and slightly forward of the rear wheel, using a boxy outline with window divisions.
3. Extend the articulated arm from the rear of the cab upward and forward, drawing two connected segments with hinge points.
4. Attach the bucket shape at the end of the arm, then add the front stabilizer/loader arm and ground line.
