Line-Only Chair Drawing: Contour Edges Without Shading

CONTOUR GUIDE / PROPORTION STRIPS / BLANK PRACTICE

Visible contour guide

Proportion strips

Seat width: 40 units

Leg length: 45 units

Backrest rise: 30 units

Independent practice

The two front legs are visible. Omit the rear pair where it is hidden and check all four given lengths separately. The blank box is for an independent line-only drawing.

Draw a simple chair from the front using contour lines only. The seat is 40 units wide and 10 units deep in the drawing; each leg is 45 units long; the backrest rises 30 units above the seat. Use no shading.

Draw a four-sided seat contour 40 units wide and 10 units deep on the page. Draw the two visible front legs down 45 units using two contour lines per leg. Omit the rear pair where it is hidden behind nearer legs or the seat; use a separate four-leg length list with 45 units for each leg to check all four stated lengths. Above the back seat edge, draw two side edges and one top edge rising 30 units. Stop backrest lines where the seat hides them. Add no shading.

- ☐ Only visible contour edges; hidden portions stop at overlaps.
- ☐ One clear edge line, consistent weights, no shading or hatching.
- ☐ Record consistent units and compare the stated lengths.

Hypothetical drawing units, not furniture standards. Only visible contours belong in the chair. Check hidden rear-leg lengths separately; the stated seat depth is its second drawn dimension. Length strips are illustrative and are not physical rulers.
