Sunflower drawing - reference

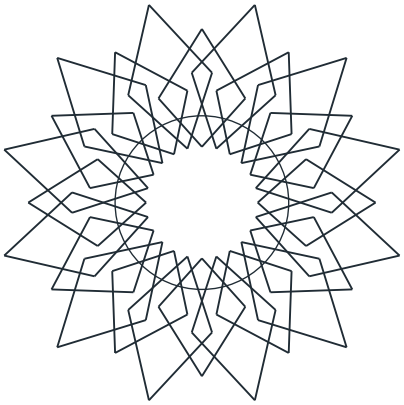

A stylised example. Many drawing solutions are valid; use the criteria below.

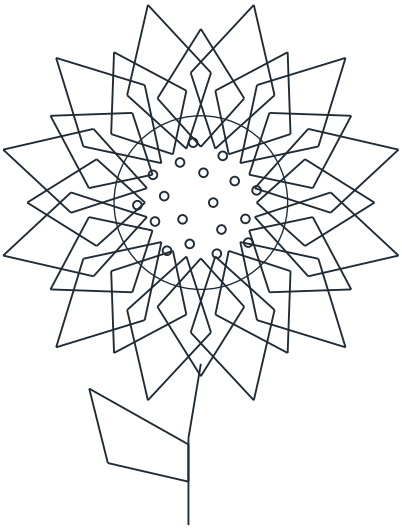

1. Set the large seed-disc proportion

2. Place the first ring of petals

3. Add a staggered second ring

4. Add a stem and the seed pattern

Check: clear main masses; aligned features; coherent overlaps; deliberate line weight.

The examples show one possible solution, not a single correct artistic answer.

Sunflower drawing / observation study

Compare the main shapes, proportions, overlaps and direction of light.

The separate construction diagram is a simplified guide, not a tracing of this study.

1. Find the largest mass before adding details.
2. Compare width and height using a common reference length.
3. Mark where shapes overlap and which contour stays visible.
4. Keep construction lines light; strengthen only the selected contour.
5. Evaluate proportions and clarity. Multiple artistic solutions are valid.
